

task description

- 1- You need to create a 3-page website as shown here at figma:
[https://www.figma.com/file/6DeOGqcKRgnraPT9ivDqaR/Signup-Flow-UI-\(Community\)?node-id=106%3A220&t=sUDAD21WSxWjMwPH-0](https://www.figma.com/file/6DeOGqcKRgnraPT9ivDqaR/Signup-Flow-UI-(Community)?node-id=106%3A220&t=sUDAD21WSxWjMwPH-0)
- 2- In the first page (welcome screen), the “get started” button should open the “register page”
- 3- In the second page (register page), user is asked to enter some data such as username, email, password, you need to validate the form
 - Username must consist of 5 to 15 characters, only letters and numbers are allowed, with no numbers at the beginning or the end, ahmed0saber is valid, 0ahmedsaber is not valid, ahmedsaber0 is not valid, ahmed_saber is not valid, etc...
 - Email must be in a valid format
 - Password must be at least 8 characters
 - Display frontend validation errors below each input
 - Use “fetch” to send user data to this endpoint <https://goldblv.com/api/hiring/tasks/register>, using “POST” method and type of “application/json”, request body should have username, email, password and password_confirmation
 - Display validation errors from api below each input
 - If no errors from api, direct user to the last page (logged in successfully), where his email is displayed from sessionStorage, localStorage or cookies
- 4- Upload your completed task to GitHub, then use link to repository to submit your job application form
- 5- Don’t forget to pay attention to clean code

OR - Finish it and upload a copy to your GitHub account then send the task's link to this what's app number 00201207620605
mention your name and job title
Good luck
